<TABLE>
<TR>
<TD><b>SITUATION:</b></TD>
<TD>Tropical Depression Barry is well north of the area, centered over southwest Arkansas and moving northward. Bands of showers and thunderstorms continue to wrap around Barry across much of the lower Mississippi River Valley. Rainfall amounts of 1 to 3 inches is expected across near and north of the Interstate 10 and 12 corridors today into tonight. The heaviest rain is generally expected to fall today. Flash Flood Watch has been extended until 6 pm CDT this evening for southeast Louisiana. There is a slight to moderate risk of excessive rainfall across the southeast two-thirds of Louisiana today and tonight. Runoff is expected to lead to areas of flash flooding. There may be some significant rises on area rivers with some rivers rising to near or above flood stage.</TD>
