GOHSEP SPECIAL EVENTS REPORT AS OF 1700 HOURS 5 SEPTEMBER 2012

STATE EOC ACTIVATION LEVEL: Level 3 Modified

SITUATION
As of 1700 hours 5 September 2012, NWS/NHC is reporting on three systems in the Atlantic-Caribbean-Gulf of Mexico basin. These systems are:

- Tropical Storm LESLIE, projected to remain out in the Atlantic
  - [Link](http://www.nhc.noaa.gov/refresh/graphics_at2+shtml/204858.shtml?5-daynl#contents)

- Tropical Storm MICHAEL, projected to remain out in the Atlantic
  - [Link](http://www.nhc.noaa.gov/refresh/graphics_at3+shtml/210005.shtml?5-daynl#contents)

- Invest 90 (the remnants of Isaac) over central Alabama (item 1 on the link below).

While MICHAEL and LESLIE will not bother us, Invest 90 is a different matter. It is expected to move generally southward into the north-central Gulf of Mexico late Wednesday or Wednesday night and remain there through the end of the week before a cold front pull it to the east northeast. Per NWS Slidell, slightly higher than normal tides are the only impact expected at this time from Invest 90.
