As of 1930 hours 16 September 2012 NWS/NHC is tracking 3 systems in the Atlantic-Caribbean-Gulf of Mexico basin. These systems are:

- Hurricane NADINE
- Invest 92 (Item 2 on the link below)
- Invest 93 (Item 1 on the link below)

The link below shows the latest position of these three systems:

http://www.nhc.noaa.gov/gtwo_atl.shtml

While NADINE is projected to remain in the Atlantic and not impact Louisiana, the other two systems bear monitoring. Invest 93, the closest to Louisiana, is of most concern.

Per NWS Slidell and Lake Charles, this system is not expected to develop into a tropical cyclone. However, it is expected to track northeastward and cross southeast Louisiana, bringing potential for heavy rains (1-2 inches over the next 2 days with some localized amounts of 2-4 inches) and isolated severe thunderstorms. Coastal winds of up to 15-20 mph can be expected with 10-15 mph winds possible inland. Some areas south of I-10 could see gusts of 20-25 mph Monday and early Tuesday. The timing for this system is Monday late morning into Monday afternoon. The latest track models for Invest 93 are shown in the link below.
