<p class="MsoNormal" style="margin-bottom: 12pt"><b>At</b><br />
2300 hours 23 July, USCG reported the drilling platform Hercules 265 caught fire, the cause of this fire is unknown at this time. USCG stated that the cause could have possibly been due to friction from sand being brought to surface. The platform continues to burn at this time and part of the tower has collapsed into the water. All the hydrocarbons are being consumed by the fire and does not pose a threat. There is currently no sheen or oil discharge and there is no anticipated spillage with this incident.<o:p></o:p></p>
